Analyzing Claims

Complete the table as you look at the pair of flyers that accompany each ballot proposal. An example relating to Proposal A has been done for you.

Proposal	Claim	Supporting Evidence	Counter-Claim
A	Cars that replace some steel with aluminum will use less energy and produce less waste and fewer pollutants.	Aluminum is lighter than steel so the cars will weigh less and therefore take less gas to make them move. This will conserve energy and produce less pollutants.	Making aluminum uses more energy than making steel and initially produces much more waste and pollutants.
